GIT的简单使用

网址: git

提交:

```
• • • git commit
```

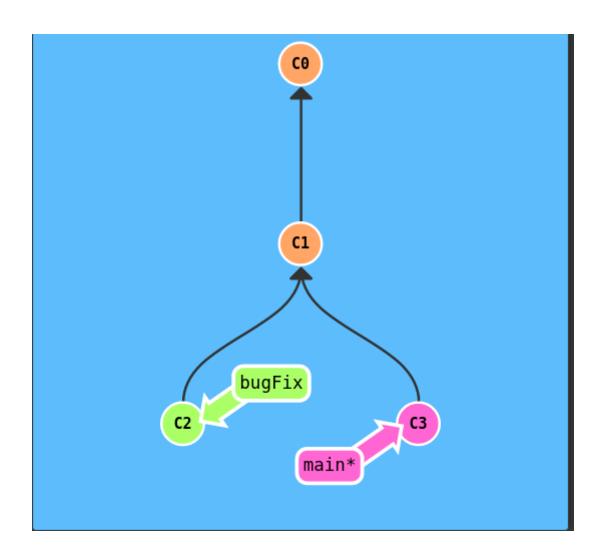

创建新分支:

```
git branch name
```

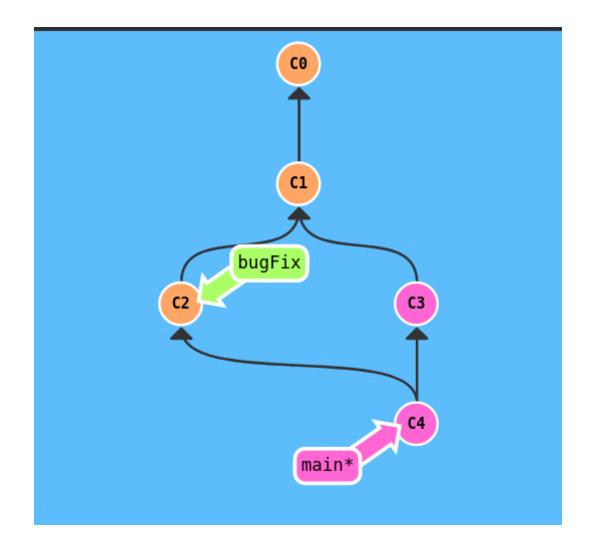

移动到分支name:

```
git checkout name
```

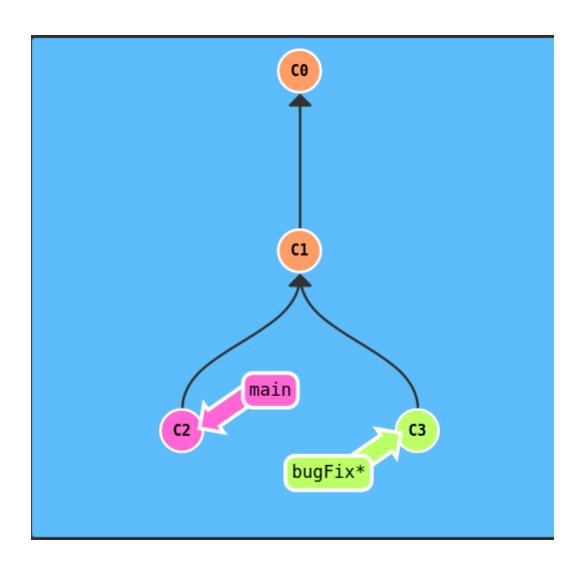

merge:

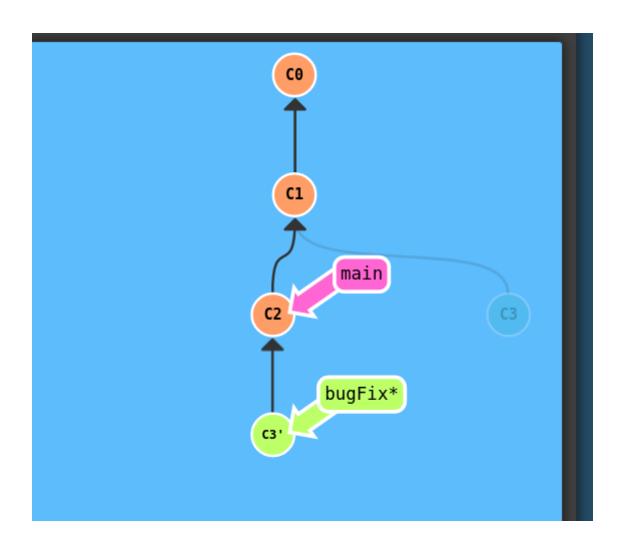

• • • git merge bugFix

rebase:

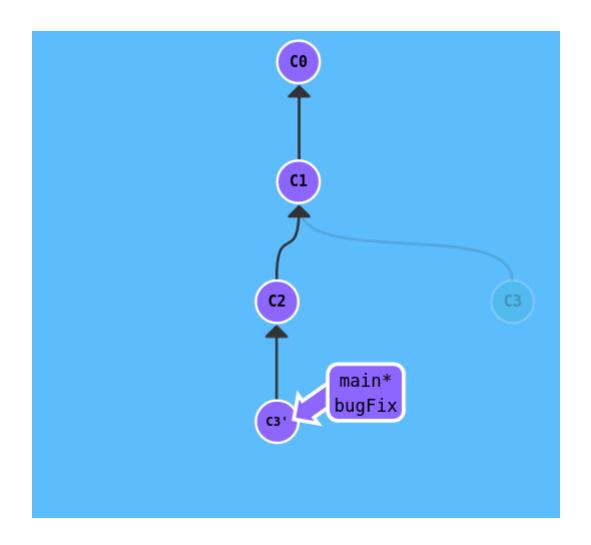

git rebase main

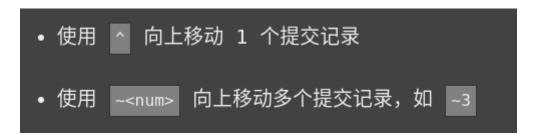

注意c3仍然存在

之后 git rebase main

分头行动:

如 git checkout main^

```
git branch -f main HEAD~3
```

将main强制u指向head的第三级父亲

revert:

用于回到以前的版本(如由c2到c1,创建一个c2*==c1)

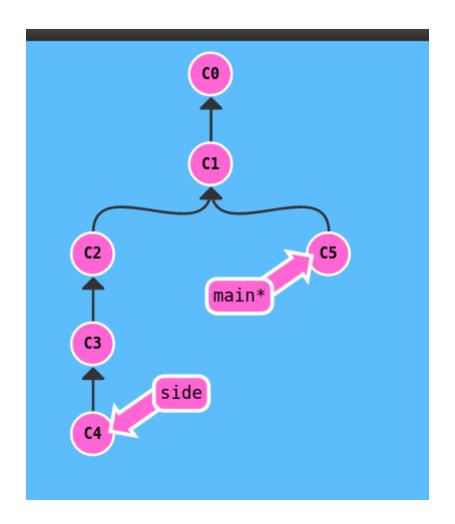

```
git revert pushed
```

reset:

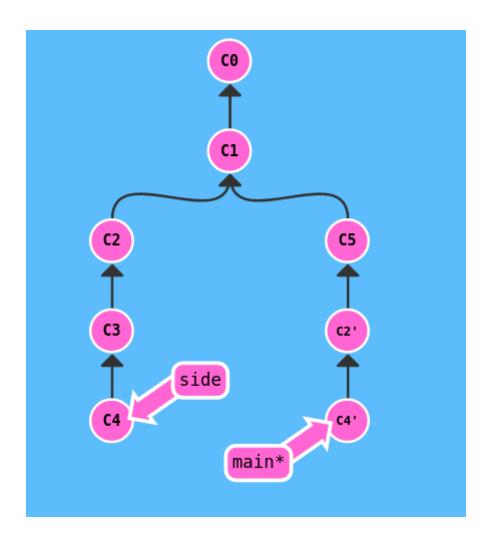

```
git reset local
```

回溯,只是把head指向c1,把c2放到暂存区

cherry-pick:

git cherry-pick C2 C4

gui-rebase:

也就是打开一个gui窗口

```
git rebase C3 -i
```
